

Wedding V3 — Laporan Hasil Testing Menyeluruh

Sorehari Photography Vendor Management | 6 Juli 2026 | Server: localhost:8080

Ringkasan Status

Komponen	Status	Catatan
Landing Page	OK	Tailwind, 2 bahasa, hero + paket
Login / Auth	OK	express-session, 3 role (admin/cs/freelancer)
Inquiry (Public)	Error 500	Path file inquiry.html salah
Dashboard Admin	Sebagian	/admin route OK, /admin/dashboard 404
CRUD Leads	OK	23 leads, public POST & admin CRUD
CRUD Clients	OK	19 clients
CRUD Bookings	OK	13 bookings, filter default pending_verification
CRUD Packages	OK	4 paket: Silver-Diamond
CRUD Freelancers	OK	5 freelancers + fee assignment
CRUD Sessions	OK	7 sesi, linked ke booking
CRUD Products	OK	5 produk
CRUD Settings	OK	Vendor name, phone, bank
Calendar API	OK	11 events Juli 2026
Invoice API	OK	Return JSON: INV-2026-0001-0013
Invoice PDF	404	routes/invoice.js tidak di-mount
Archive	OK	1 lost lead + 1 completed booking
Public Booking Flow	OK	Select paket → Upload DP
Pelunasan (Public)	OK	Token → Upload bukti → Confirm
Admin Booking Detail	OK	Crew assignment + sessions + finance

Alur Berfungsi (End-to-End Tested)

Public Flow — Client Side (Tested)

1. Landing page → 200 OK
2. POST /api/leads → Lead created (ID 24)
3. POST /api/leads/:id/convert → Booking token + WA link generated
4. GET /booking/:token → 200 OK (html page loads)
5. POST /api/bookings/public/:token/select-package → Pilih Silver/Gold/Platinum/Diamond → update price
6. POST /api/bookings/public/:token/upload-receipt → Upload bukti DP 30% → file tersimpan di uploads/
7. DATA: booking status jadi pending_verification

Admin Flow — Verify DP → Confirmed (Tested)

1. POST /api/login → session admin
2. GET /admin → Dashboard stats: 13 bookings, Rp53jt income, Rp2.2jt expense
3. GET /admin/bookings → Lihat pending_verification booking
4. POST /api/bookings/:id/verify-dp → Verify DP → status jadi confirmed + client_id terbuat (ID 20)
5. Booking detail (@ /admin/booking-detail) → Tambah sessions, assign crew
6. POST /api/bookings/:id/generate-pelunasan-token → Token untuk client

Admin CRUD (Tested)

Leads (GET/POST/PUT/DELETE) — Clients — Bookings — Packages — Freelancers — Sessions — Products — Settings — Archive — Calendar — semuanya return data valid.

Pelunasan Flow (Tested)

1. Generate token admin → GET /pelunasan/:token 200 OK
2. GET /api/bookings/pelunasan/:token → Return client & payment info
3. POST upload & confirm → Status selesai

Critical Issues

#1 Inquiry Page Error 500 — Path File Salah

Lokasi: server.js baris ~103

Penyebab: fs.readFileSync(path.join(__dirname, 'inquiry.html')) — file di root proyek tidak ada. File asli di public/inquiry.html.

Dampak: GET /inquiry → 500 Internal Server Error. Client tidak bisa submit form inquiry.

Fix: Ganti path ke public/inquiry.html

#2 Admin Dashboard Page 404

Lokasi: server.js route /admin/:page serve private/admin/\${page}.html

Penyebab: dashboard.html tidak ada di private/admin/. Dashboard real ada di private/admin/index.html (diserve di /admin).

Dampak: Jika sidebar link arah ke /admin/dashboard → 404. Sidebar saat ini sudah benar arah ke /admin.

#3 File admin.js (232KB) Tidak Dipakai Sama Sekali

Letak: public/js/admin.js — 4.609 baris, 232KB

Masalah: Semua admin page di private/admin/ hanya load /admin/js/app.js (314 baris, helper dasar). Tidak satu pun page load file admin.js.

Fitur di admin.js: Popup filter status (project_status + payment_status), crew assignment modal, cancel booking + compensation, invoice print modal, package change modal, session fee calculations.

Status: 232KB file "kode mati" — tidak dieksekusi.

#4 Mismatch Field — admin.js vs Backend V3

Bahkan jika admin.js di-load, field yang diharapkan tidak cocok dengan data dari backend V3:

Diharapkan admin.js	Disediakan V3
b.total_deal_price	b.total_income
b.dp_paid_amount	Tidak ada (dihitung dari payments)
b.final_paid_amount	Tidak ada
b.payment_status	Pakai b.status
b.project_status	Tidak ada
b.freelancers	Tidak di-join
b.client_phone	Tidak di view
b.base_price	b.package_price
b.discount_amount, b.special_requests, b.additional_services, b.operational_cost, b.location, b.required_fg, b.required_vg	Semua tidak ada di V3

Kesimpulan: admin.js V2 — bukan untuk V3.

#5 Invoice PDF Route 404

File routes/invoice.js ada (4.9KB, generate PDF) tapi **tidak di-mount** di server.js. Tidak ada app.use yang mengarah ke route ini.

Route invoice yang bekerja: /api/bookings/invoice/:id — return JSON (di routes/bookings.js baris 112).

Dampak: Download invoice PDF tidak bisa.

Fix: Mount routes/invoice.js di server.js.

#6 Filter Booking Default pending_verification

Di private/admin/bookings.html baris 24: <option value="pending_verification" selected>

Booking baru hasil convert lead berstatus proposal_sent — tidak muncul sampai admin ubah filter manual.

Dampak: Admin mungkin kira booking baru tidak muncul di daftar.

Minor Issues

#7 Duplikasi Endpoint Invoice

Ada 2 implementasi: JSON di bookings.js, PDF di invoice.js — path berbeda, tujuan sama. Tidak konsisten.

#8 Auth Session-based

Middleware requireAuth cek req.session.user (express-session), bukan JWT. Bekerja, tapi beda dari V2.

Data Saat Ini

Entitas	Jumlah
---------	--------

Leads	23
Bookings	13
Clients	19
Packages	4 (Silver 6jt, Gold 8jt, Platinum 10jt, Diamond 15jt)
Freelancers	5
Sessions	7
Products	5
Payments	10+ tercatat
